Ci41	Ci41A	Ci41T
245	355	420

Nominal effect	7,0 kW
Efficiency	81 %
Flue gas temperature in the connection at nominal output	273°C
Flue gas mass flow	6,0 g/s

Type approved in accordance with:

European standard EN-13240
NS 3059 (Norway)
BImSchV.2 (Germany)
Art. 15a B-VG (Austria)
Clean Air Act. (UK)

THE INSERT BECOMES VERY HOT

Parts of the insert become very hot when it is in use and can cause burns if touched. You should also be careful of the heat that transfers through the door glass. Combustible materials must be kept at the stated safe distance to prevent the risk of fire. A smouldering fire emits gases that can suddenly ignite and cause material damage and personal injury.

Installation by a licensed professional

This manual contains instructions on how to assemble and install the insert. We recommend the insert be installed by a qualified tradesperson to ensure it functions safely and properly. Contact one of our dealers who can recommend professional installers.

Planning permission

You must apply for planning permission from your local authority before installing a stove or erecting a chimney. We recommend you contact your local authority for advice and information on planning permission.

Structural support

If the firebox is to be positioned on a wooden joist, a structural engineer should evaluate the load capacity of the floor. When the gross weight exceeds 400 kg, reinforcement of the wooden joists is usually necessary.

Hearth plate

Due to the risk of falling embers, a flammable floor must be protected by a hearth plate. It must extend 300 mm in front of the stove and 100 mm on each side of the stove, or have a 200 mm extension on each side of the opening. The hearth plate can consist of natural stone, concrete, metal plate or glass. A glass hearth plate is available as an accessory for these models.

Final inspection of the installation

When it has been installed, the insert must be inspected by a licensed chimney sweep before it can be used. You should also read the "Lighting instructions" before lighting the stove for the first time.

Walls behind

If your Contura i51 is to be installed against a combustible wall, the wall must be protected by a firewall or by the integrated protective screen (optional accessory).

The following material requirements are made of the firewall:

The building material must not be combustible.

The thermal conductivity coefficient λ must be a maximum of 0.14 W/mK. The thickness of the building material must always be at least 100 mm. In cases where the building material's insulation properties are given as a U-value, this must be a maximum of 1.4 W/m²K.

List of suitable materials:

Aerated concrete	$\lambda = 0.12-0.14$
Vermiculite	$\lambda = 0.12-0.14$
Calcium silicate	$\lambda = 0.09$

Products with an integrated protective screen can be installed in front of a wall with a minimum U-value of 0.08 W/(m²K).

Contact your chimney sweep for advice in choice of other materials. Remember that even a non-combustible wall may require protection if it is a load bearing wall or has combustible material behind it.

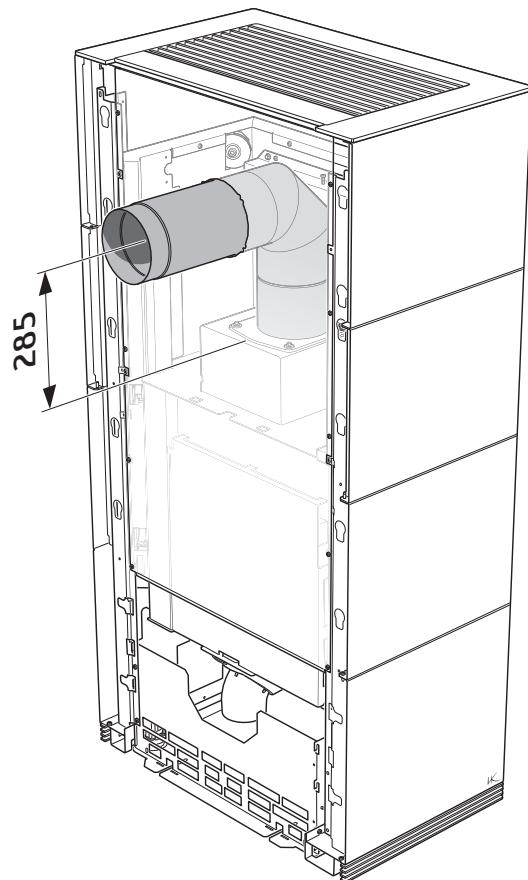

Connection to chimney

- The insert must be connected to a chimney designed to withstand flue gas temperatures of up to 400°C.
- The external diameter of the connection sleeve is 150 mm.
- In normal operating mode, draft in the chimney should be 20-25 Pa close to the connection sleeve. The draft is affected primarily by the length and area of the chimney and also by how well sealed it is. The recommended minimum flue length is 3.5 m and its diameter should be Ø130 to Ø150 mm.
- Sharp bends and horizontal lengths in a flue pipe reduce the draft in the chimney. The maximum horizontal length of flue pipe allowed is 1 m, provided the flue pipe rises vertically for at least 5 m.
- It must be possible to sweep the full length of the flue, and the soot doors must be easily accessible.
- Carefully check that the chimney is sealed and that there is no leakage of smoke from the soot doors or connections.

Rear connection

If connecting at the rear, we recommend using a 45° +45° angle with a soot hatch and with the centre 285 mm above the sleeve.

Note that if connecting at the rear, a heat deflector or protective screen must be installed before the chimney is connected.

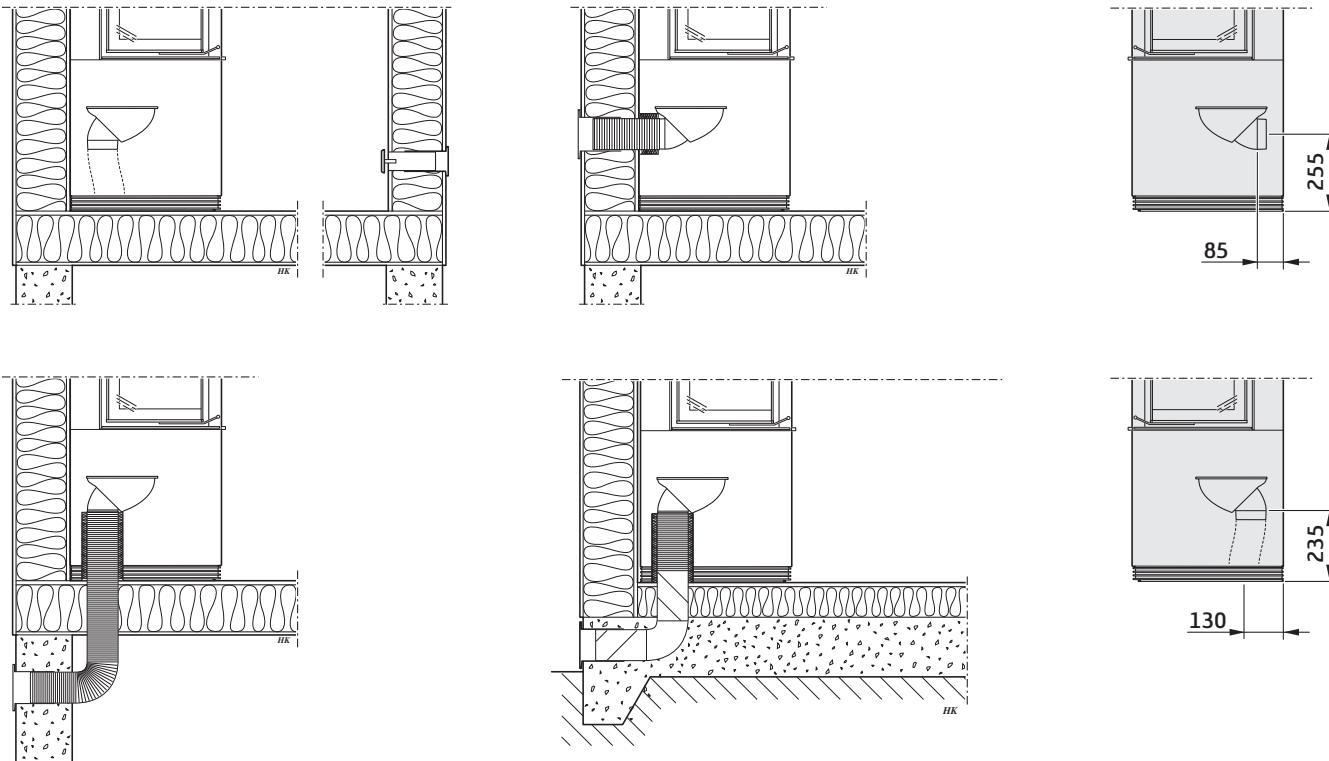

Combustion air supply

When an insert is installed, the need for an adequate supply of air to the room increases. Air can be provided indirectly via a vent in the outer wall or via a duct from the outside that connects to the sleeve on the underside of the insert. The required volume of combustion air is about 25 m³/hour.

The outer diameter of the combustion air connection sleeve is 100 mm.

In heated spaces, the flue must be insulated to prevent condensation using 30 mm mineral wool covered with a vapour barrier. The hole in the wall (or floor) at the exit point must be properly sealed with flue jointing compound.

A 1-metre combustion-air tube insulated to prevent condensation is available as an optional extra.

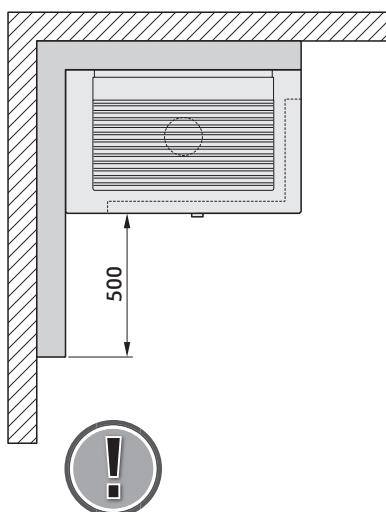

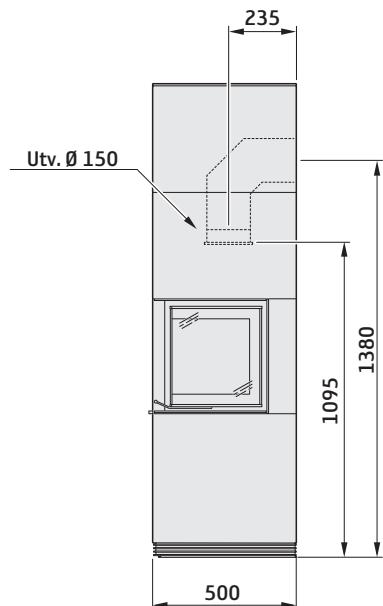

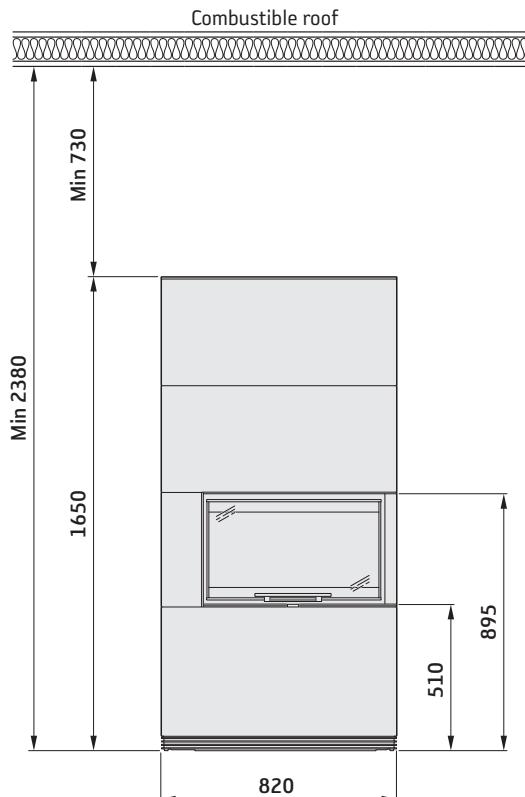

Installation distances

Ci41 / Ci41A / Ci41T

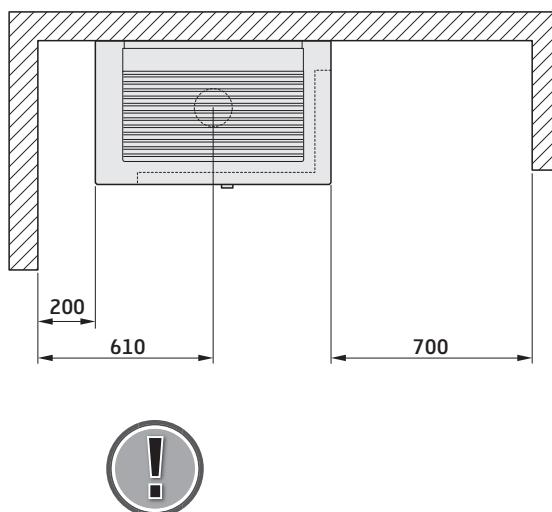

Important!

The dimension diagrams only show the minimum permitted installation distances for the stove. When connecting to a steel chimney, the requirements for safe distance to the

chimney must also be observed. A clearance of at least 1,5 m must be allowed as a safe distance between the front of the stove and combustible building elements or furnishings.

For corner installation, the rear and side walls must always be non-combustible, alternatively both must be protected by an external firewall. Material requirements for firewall according to the section "Walls behind" on page 23.

* If the stove is to be positioned against a combustible rear wall, the wall must be protected by an external firewall or the integrated protective screen (available as an optional accessory in some markets) The material requirements for the firewall are specified in the section "Walls behind" on page 23.

**Declaration of performance according
to Regulation (EU) 305/2011**

No. Ci41-CPR-220901

- NL** Ga naar pagina 68 voor de montage van rooster en bovenplaat.

SE**Montering av omramning**

Hantera endast stenen med rena händer eller handskar. Hantera stenen varsamt för att inte skada känsliga hörn och kanter.

Stenen är ett naturmaterial, vilket innebär att vissa ojämnheter och variationer finns i dess utseende. Stenen rengörs med fuktig trasa. Vid behov kan såpavatten användas. Kontrollera under monteringen av varje stenskift att samtliga stenar står rakt och att samtliga stenar blir jämnhöga. **Shimsa vid behov.**

FR**Montage de l'habillage**

Manipulez les pierres uniquement avec des mains ou des gants propres. Manipulez soigneusement les pierres afin de ne pas endommager les coins et les bords fragiles.

La pierre est un matériau naturel qui, par définition, présente des irrégularités de structure et d'aspect. La pierre se nettoie avec un chiffon humide. De l'eau savonneuse peut être utilisée, si besoin. Vérifiez durant l'installation de chaque rangée de pierre que toutes les pierres sont droites et qu'elles sont au même niveau. **Utilisez des cales le cas échéant.**

FI**Kuoren asennus**

Pese aina kädet ennen kivien käsittelyä tai käytä käsinneitä. Käsitlee kiviä varoen, jotta kulmat ja reunat eivät vaurioidu.

Kivi on luonnonmateriaali, mikä tarkoittaa, että sen pinnassa on epätasaisuuksia ja vaihtelua. Kivet puhdistetaan kostealla liinalla. Tarvittaessa voidaan käyttää saippuavettä. Tarkasta kunkin kivikerroksen asennuksen aikana, että kaikki kivet ovat suorassa ja että kaikki kerroksen osat ovat yhtä korkeita. **Säädä tarvittaessa.**

DE**Montage der Verkleidung**

Fassen Sie die Steine nur mit sauberen Händen oder Handschuhen an. Gehen Sie vorsichtig mit den Steinen um, damit empfindliche Ecken und Kanten nicht beschädigt werden.

Die Steine sind ein natürliches Material, daher können gewisse Unregelmäßigkeiten und Abweichungen beim Erscheinungsbild vorkommen. Die Steine werden mit einem feuchten Tuch gereinigt. Bei Bedarf kann Seifenwasser verwendet werden. Kontrollieren Sie bei der Montage sämtlicher Steinschichten, dass alle Steine gerade stehen und dieselbe Höhe aufweisen. **Nutzen Sie bei Bedarf Distanzscheiben.**

GB**Assembling the surround**

Only handle the stone with clean hands or gloves. Handle the stone carefully so as not to damage fragile corners and edges.

The stone is a natural material, which means that there may be certain irregularities and variations in its appearance. Clean the stone with a damp cloth. Soapy water can be used if necessary. During assembly, check that all the stone sections are straight and that all stones are of a uniform height. **Use shims if necessary.**

IT**Montaggio del rivestimento**

Manipolare le pietre solo con le mani pulite, oppure con i guanti. Manipolare le pietre con attenzione per non danneggiarle. I bordi e gli angoli sono particolarmente fragili.

La pietra è un materiale naturale, quindi presenta variazioni e differenze. Pulire la pietra con un panno umido, se necessario si può usare acqua saponata. Durante l'installazione di ogni modulo in pietra, controllare che tutte le pietre siano collocate dritte e ad uguale altezza. **Inserire degli spessoramenti se necessario.**

NO**Montering av omramming**

Ha alltid rene hender eller bruk hansker ved håndtering av steinen. Håndter steinen varsomt for å unngå skade på skjøre hjørner og kanter.

Steinen er et naturmateriale, det innebærer at overflaten kan ha visse ujevnheter og variasjoner. Steinen rengjøres med en fuktig klut. Ved behov kan såpevann benyttes. Kontroller under monteringen av hvert steinlag at samtlige steiner står rett, og at alle steinene blir like høye. **Juster ved behov med shimsskiver.**

DK**Montering af omramning**

Only handle the stone with clean hands or gloves. Handle the stone carefully so as not to damage fragile corners and edges.

The stone is a natural material, which means that there may be certain irregularities and variations in its appearance. Clean the stone with a damp cloth. Soapy water can be used if necessary.
